Data duplication

Alpha Smart IoT gateway · https://faqdoc.info/en/systemauswahl/alpha-smartware-en/alpha-smart-iot-gateway-en/is-the-system-logic-sophisticated-enough-so-that-there-are-no-problems-if-multiple-gateways-send-the-same-information-from-a-device-to-the-cloud/

Is the system logic sophisticated enough so that there are no problems if multiple gateways send the same information from a device to the cloud?

Yes, duplicates are identified, so that the message is only processed once. The process is called data deduplication. It allows a device to send its wireless data to several gateways without causing malfunctions.
